

The basic frame layout is the same for all of the pages.

Header and footer as before on other pages you have already coded.

There is a right hand column on all pages which now contains some new furniture - specifically a search drop down box.

The right hand column is the same on all pages.

The pages need to be responsive and I will put on the notes document for each pages which elements we can drop for the mobile versions of the pages.

1) Why Use Us page

Hi Nick here is the first page of 4. There are 2 text docs - one explains the new quick search box. Please liaise with Simon/Ludo as to how this new quick search box needs to be coded. The other text doc is the text for this page with explanation of 2 pop ups. Plus psd and a jpeg for ref. Please let me know if you need anything else. Thanks Nicki"

FOR MOBILE:

Please put all elements in the right hand column at the end of the main text so they flow underneath and please can you advise how best to treat the two pop up forms on mobile :-/

2) Meet the team

"2nd Page Meet the team. Please let me know if you need the people images as separate jpegs and if so what size please. This page also sits in the 'About' section on the nav bar and is called 'Meet the team' Thanks."

3) Contact Us Page

"page 3 of 4 - Contact us page. This page is to sit under 'Contact' in the nav bar. Please let me know if you need the images in a different format. Thanks"

4) Testimonials

page 4 of 4 Testimonials page to sit in About section on nav bar. Please read the text doc before you start this page. Thanks !

They also need a pop up on one of the pages. - needs to be designed.

For example there is a button 'Sell your property with us' which once clicked they want a pop up form to appear on the screen for people to fill in with their details and send.
